CLASS-XII (H.P.)

CHEMISTRY

	llowed: 3 Hours Maximum Marks: 60 Instructions: Same as in Model Test Paper—1.
rime A	Instructions: Same as in Model Test Paper—1.
special	Illowed: 3 Hours Instructions: Same as in Model Test Paper—1. Fog is colloidal system of: (b) Gas in gas
1.	(a) Liquid in gas (b) Gas in gas (c) Solid in gas
The second secon	
	(c) Gas in figure (c) Gas in figure (c) as :
2.	(c) Gas in liquid The arrangement ABC ABC is referred to as:
	(a) Octanicular Close Pacific
	(b) Hexagonal close packing
	(c) Tetrahedral close packing
	(d) Cubic close packing.
1	(d) Cubic close packing. On mixing 10 ml. of acetone with 50 ml of chloroform the total volume of the solution
	is: (b) More than 60 ml
	(a) Less than 60 ml (b) More than 60 ml
	(d) Inpredictable.
1	Which of the following metals can deposit copper from copportunity
	(b) Morcury
	(a) Platinum.
	l'-b-mata is manufactured Hom.
F-1-1	(a) Chronite ord
	(c) CrCl ₃ Which one belongs to second transition series?
6.	Which one belongs to second trains (b) Cobalt
	(a) Copper
ALCOHOLD TO THE REAL PROPERTY OF THE PERTY O	Define osmosis.
8.	Define peptisation. How is degree of dissociation is related to Van't Hoff Factor? How is degree of dissociation is related to Van't Hoff Factor?
9.	How is degree of dissociation is related to Van't Hoff Factor?
10	What is II S - H bond angle in 1-2
11.	What is $H - S - H$ bond angle in H_2S ? What is the distance between Na ⁺ and Cl ⁻ ions in NaCl crystalline solid if the density What is the distance between Na ⁺ and Cl ⁻ ions in NaCl crystalline is face centred cubic lattice ($N_A = 6.02 \times 10^{23}$). is 2.165 g cm ⁻³ ? NaCl crystalline is face centred cubic lattice ($N_A = 6.02 \times 10^{23}$).
Art at a	ic 2 165 a cm ⁻³ / NaCl Clystania
12.	is 2.165 g cm ⁻³ ? NaCl crystalline is face containing in Sulphur (ii) Gold? How will you prepare colloidal solution of (i) Sulphur (ii) Gold?
113	Coloulete the molarity of KCI solution.
	Calculate the molarity of Residue 1 is 2K. [K _f for water = 1.86 K kg mol ⁻¹] is 2K. [K _f for water = 1.86 K kg mol ⁻¹] How are antiseptics different from disinfectants? Give the name of a substance which how are antiseptic and disinfectant.
14.	How are antiseptics different nom-
Market Age	And I II A ANTICATILL GIVE -
15.	can act both as antiseptic and disinfectant. Write the IUPAC names of the following compounds:
	Write the IUPAC names of the following compounds: (i) $CH_3 - CH - CH_2 - CH_2 - CHO$
	(i) $CH_3 - CH - CH_2 - CH_2$

16. Explain the following:

(i) Reimer-Tiemann reaction (ii) HVZ reaction.

17. Distinguish between slag and flux.

18. Phenol is more acidic than ethyl alcohol. Explain. How will you convert phenol into

(i) Phenolphthalein

(ii) Salicylic acid?

CAMPAGE TO A SECRET STATE OF THE SECRET STATE

THE PROPERTY OF THE PARTY OF TH

- 19. A compound A with molecular formula C₅H₁₀O gave positive 2, 4-D.N.P. test but a negative Tollen's test. It was oxidised to carboxylic acid B with molecular formula C₃H₆O₂ when treated with alkaline KMnO₄ under vigorous conditions. Sodium salt of B gave a hydrocarbon C on Kolbe's electrolytic reaction. Identify A, B and C and write the chemical equations.
- 20. (a) Discuss the mechanism of nitration of benzene.
 - (b) What happens when nitrobenzene is reduced in alkaline medium?
 - (c) Write two uses of nitro compounds.
- 21. The half life period for a reaction $N_2O_5 \longrightarrow 2NO_2 + 1/2O_2$ is 2.4 hours at 30°C.
 - (a) Starting from 100 grams of N₂O₅, how many grams will remain after a period of 9.6 hours.
 - (b) What time would be required to reduce 5×10^{10} molecules of N_2O_4 to 10^8 molecules?
- 22. A galvanic cell consists of metallic lead plate immersed in 0.02 M lead nitrate solution and a zinc plate immersed in 0.1 M zinc nitrate solution. Calculate emf of the cell at 25°C. Write the chemical equations for the electrode reactions. Given that:

$$E_{Zn^{2+}/Zn}^{\circ} = -0.76 \text{ V}; E_{Pb^{2+}/Pb}^{\circ} = -0.13 \text{ V}.$$

- 23. (a) Illustrate optical isomerism in co-ordination compounds with a suitable example.
 - (b) Explain the bonding and structure of $[Fe(CN)_6]^{3-}$ using valence bond theory.
- 24. What is mutarotation? Why is sucrose regarded as reducing sugar?

grienol with biles and lategra Dall niers or Or see Masser deside and see the density

What is structural difference in Nylon-6 and Nylon-66? Give the synthesis of Nylon-66.

- 25. How will you convert chloro benzene into:
 - (a) Benzene

(b) DDT

THE POST OF THE DATE OF THE STREET STREET, AND STREET, AND STREET,

- (c) Diphenyl.
- 26. (a) What are interhalogen compounds? Write the structures of ClF₃ and IF₇.
 - (b) Arrange the following in order of increasing acidic strength: HClO, HBrO, HIO.
 - (c) How will you account for the following:

- Sn²⁺ ion is more common than Sn⁴⁺ ion.
- (iii) H₃BO₃ is a monobasic acid, why?
- What is lanthanide contraction? Explain its cause. Give one consequence of it.
- Compare and contrast lanthanides and actinides.
- Why do transition metals show variable oxidation states and form complex compounds?
- Discuss the preparation of potassium dichromate from chromite.
- Discuss the chemistry of chromyl chloride test.
- Write the structure of the chromate and dichromate ions.
